

Manage resource groups and template deployments:	
az group create	Create a new resource group.
az group delete	Delete a resource group.
az group deployment	Manage Azure Resource Manager deployments.
az group deployment cancel	Cancels a currently running template deployment.
az group deployment create	Start a deployment.
az group deployment delete	Deletes a deployment from the deployment history.
az group deployment export	Export the template used for deployment.
az group deployment list	Get all the deployments for a resource group.
az group deployment operation	Manage deployment operations.
az group deployment operation list	Gets all deployments operations for deployment.
az group deployment operation show	Get a deployment's operation.
az group deployment show	Gets a deployment.
az group exists	Check if a resource group exists.
az group list	List resource groups.
az group lock	Manage Azure resource group locks.
az group lock create	Create a resource group lock.
az group lock delete	Delete a resource group lock.
az group show	Gets a resource group.
az group update	Update a resource group.
Manage Linux or Windows virtual machines.	
az vm application	Manage applications for VM.
az vm application list	List applications for VM.
az vm application set	Set applications for VM.
az vm assess-patches	Assess patches on a VM.
az vm auto-shutdown	Manage auto-shutdown for VM.
az vm availability-set	Group resources into availability sets.
az vm availability-set create	Create an Azure Availability Set.
az vm availability-set delete	Delete an availability set.
az vm availability-set list	List availability sets.
az vm availability-set list-sizes	List VM sizes for an availability set.
az vm availability-set show	Get information for an availability set.
az vm availability-set update	Update an Azure Availability Set.
az vm capture	Capture information for a stopped VM.
az vm convert	Convert a VM with unmanaged disks to use managed disks.
az vm create	Create an Azure Virtual Machine.

az vm deallocate	Deallocate a VM.
az vm delete	Delete a VM.
az vm diagnostics	Configure the Azure Virtual Machine diagnostics extension.
az vm disk	Manage the managed data disks attached to a VM.
az vm disk attach	Attach a managed persistent disk to a VM. Please note that –ids only supports one disk.
az vm disk detach	Detach a managed disk from a VM.
az vm encryption	Manage encryption of VM disks.
az vm encryption show	Show encryption status.
az vm extension	Manage extensions on VMs.
az vm extension image list-versions	List the versions for available extensions.
az vm get-instance-view	Get instance information about a VM.
az vm host	Manage Dedicated Hosts for Virtual Machines.
az vm host create	Create a dedicated host.
az vm host delete	Delete a dedicated host.
az vm identity	Manage service identities of a VM.
az vm identity assign	Enable managed service identity on a VM.
az vm identity remove	Remove managed service identities from a VM.
az vm identity show	Display VM's managed identity info.
az vm image list-skus	List the VM image SKUs available in the Azure Marketplace.
az vm list	List details of Virtual Machines.
az vm list-ip-addresses	List IP addresses associated with a VM.
az vm list-sizes	List available sizes for VMs.
az vm list-skus	Get details for compute-related resource SKUs.
az vm list-usage	List available usage resources for VMs.
az vm list-vm-resize-options	List available resizing options for VMs.
az vm monitor	Manage monitor aspect for a vm.
az vm nic	Manage network interfaces. See also az network nic.
az vm nic add	Add existing NICs to a VM.
az vm nic list	List the NICs available on a VM.
az vm open-port	Opens a VM to inbound traffic on specified ports.
az vm redeploy	Redeploy an existing VM.
az vm repair	Auto repair commands to fix VMs.
az vm resize	Update a VM's size.
az vm restart	Restart VMs.
az vm secret	Manage VM secrets.
az vm secret add	Add a secret to a VM.

az vm secret format	Transform secrets into a form that can be used by VMs and VMSSes.
az vm secret list	List secrets on a VM.
az vm secret remove	Remove a secret from a VM.
az vm start	Start a stopped VM.
az vm stop	Power off (stop) a running VM.
az vm update	Update the properties of a VM.
az vm user	Manage user accounts for a VM.
az vm user delete	Delete a user account from a VM.
az vm user reset-ssh	Reset the SSH configuration on a VM.
az vm user update	Update a user account.
az vm wait	Place the CLI in a waiting state until a condition of the VM is met.
Manage storage accounts.	
az storage account check-name	Check that the storage account name is valid and is not already in use.
az storage account create	Create a storage account.
az storage account delete	Delete a storage account.
az storage account encryption-scope	Manage encryption scope for a storage account.
az storage account failover	Failover request can be triggered for a storage account in case of availability issues.
az storage account file-service-properties	Manage the properties of file service in storage account.
az storage account generate-sas	Generate a shared access signature for the storage account.
az storage account keys	Manage storage account keys.
az storage account list	List storage accounts.
az storage account management-policy	Manage storage account management policies.
az storage account network-rule	Manage network rules.
az storage account or-policy	Manage storage account Object Replication Policy.
az storage account or-policy create	Create Object Replication Service Policy for storage account.
az storage account or-policy delete	Delete specified Object Replication Service Policy associated with the specified storage account.
az storage account private-endpoint-connection	Manage storage account private endpoint connection.
az storage account private-link-resource	Manage storage account private link resources.
az storage account private-link-resource list	Get the private link resources that need to be created for a storage account.
az storage account revoke-delegation-keys	Revoke all user delegation keys for a storage account.
az storage account show	Show storage account properties.
az storage account show-connection-string	Get the connection string for a storage account.
Manage KeyVault keys, secrets, and certificates.	
az keyvault backup	Manage full HSM backup.
az keyvault certificate	Manage certificates.
az keyvault certificate create	Create a Key Vault certificate.

az keyvault create	Create a Vault or HSM.
az keyvault delete	Delete a Vault or HSM.
az keyvault delete-policy	Delete security policy settings for a Key Vault.
az keyvault key	Manage keys.
az keyvault key backup	Request that a backup of the specified key be downloaded to the client.
az keyvault key create	Create a new key, stores it, then returns key parameters and attributes to the client.
az keyvault key decrypt	Decrypt a single block of encrypted data.
az keyvault key delete	Delete a key of any type from storage in Vault or HSM.
az keyvault key download	Download the public part of a stored key.
az keyvault key encrypt	Encrypt an arbitrary sequence of bytes using an encryption key that is stored in a Vault or HSM.
az keyvault key restore	Restore a backed up key to a Vault or HSM.
az keyvault key rotate	Rotate the key based on the key policy by generating a new version of the key.
az keyvault key rotation-policy	Manage key's rotation policy.
az keyvault key show	Get a key's attributes and, if it's an asymmetric key, its public material.
az keyvault key show-deleted	Get the public part of a deleted key.
az keyvault list	List Vaults and/or HSMs.
az keyvault list-deleted	Get information about the deleted Vaults or HSMs in a subscription.
az keyvault network-rule	Manage vault network ACLs.
az keyvault recover	Recover a Vault or HSM.
az keyvault restore	Manage full HSM restore.
az keyvault restore start	Restore a full backup of a HSM.
az keyvault role	Manage user roles for access control.
az keyvault secret	Manage secrets.
az keyvault secret backup	Backs up the specified secret.
az keyvault secret list	List secrets in a specified key vault.
az keyvault secret show	Get a specified secret from a given key vault.
az keyvault storage	Manage storage accounts.
az keyvault update	Update the properties of a Vault.
Manage SQL servers.	
az sql server create	Create a server.
az sql server delete	Deletes a server.
az sql server dns-alias	Manage a server's DNS aliases.
az sql server firewall-rule	Manage a server's firewall rules.
az sql server firewall-rule create	Create a firewall rule.
az sql server key	Manage a server's keys.
az sql server key create	Creates a server key.

az sql server key show	Shows a server key.
az sql server list	List available servers.
az sql server list-usages	Returns server usages.
az sql server outbound-firewall-rule	Manage a server's outbound firewall rules.
az sql server show	Gets a server.
az sql server vnet-rule	Manage a server's virtual network rules.
az sql server vnet-rule create	Create a virtual network rule to allows access to an Azure SQL server.
az sql server vnet-rule delete	Deletes the virtual network rule with the given name.
az sql server vnet-rule list	Gets a list of virtual network rules in a server.
